

Brain Puzzle Art

This document is very informal but has been prepared to share our vision with you. As Brain Puzzle Art, we try to make you understand why we dedicate ourselves to this group of intelligence games, which is our first project, and our motivation.

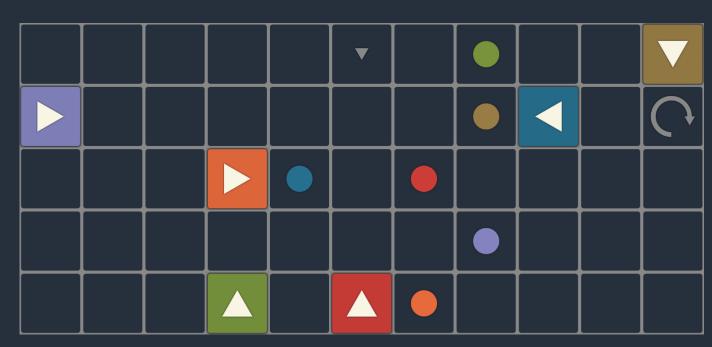

You are currently reading the first version of our article, there will of course be positive developments and ideas that will make you happy in the future in line with our vision and goals. But the main idea of the games we will develop in the future will not change in general.

NFT

This idea emerged as follows. Even the informatics who are closely interested in technology have difficulty in understanding NFT and are hesitant to invest. The current NFT economy thrives on reputation. However, it has not been fully explained what the reputation is. Currently, NFTs cannot provide any passive income to their holders. The investor buys and has to wait until it gains value. We want to break this memorization. With our project, for the first time in the world, an algorithm will be purchased together with an NFT and you will be the owner of that part of the puzzle.

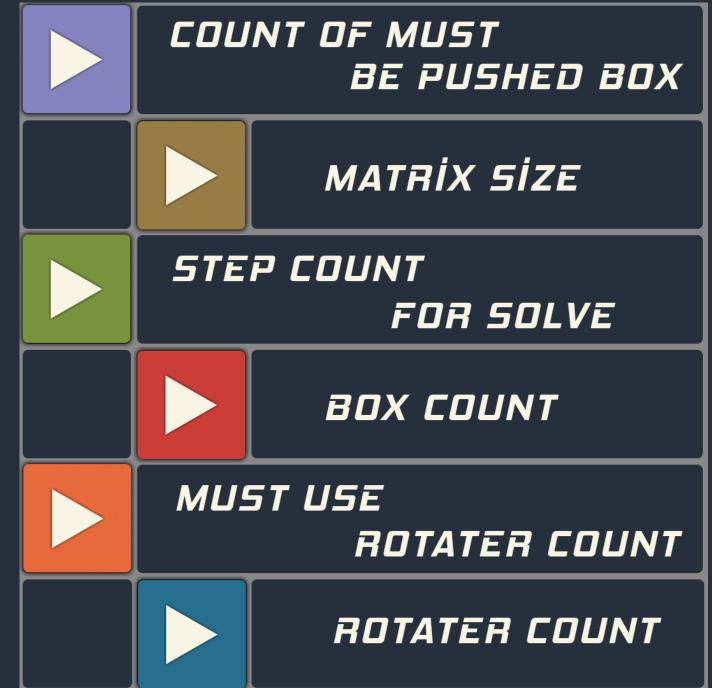

The game rules of the puzzle are extremely simple, but it will be extremely difficult to solve the puzzle. After our game is released, you will be rewarded when the NFT part of the puzzle you own is solved by anyone. The person who solves the chapter will be rewarded. Prizes will be distributed for each chapter only when it is first solved. This app will be the first time in the world. This award will be made in BPA, our in-game economy cryptocurrency. At the same time, a random puzzle NFT will be selected at a certain time, 2 times a day, and presented to the players. Bets will be placed before this puzzle level is announced, and in these bets, the owner of the NFT will again earn passive income for the first time in the world.

NFT PROPERTIES

That Determine The NFT Value

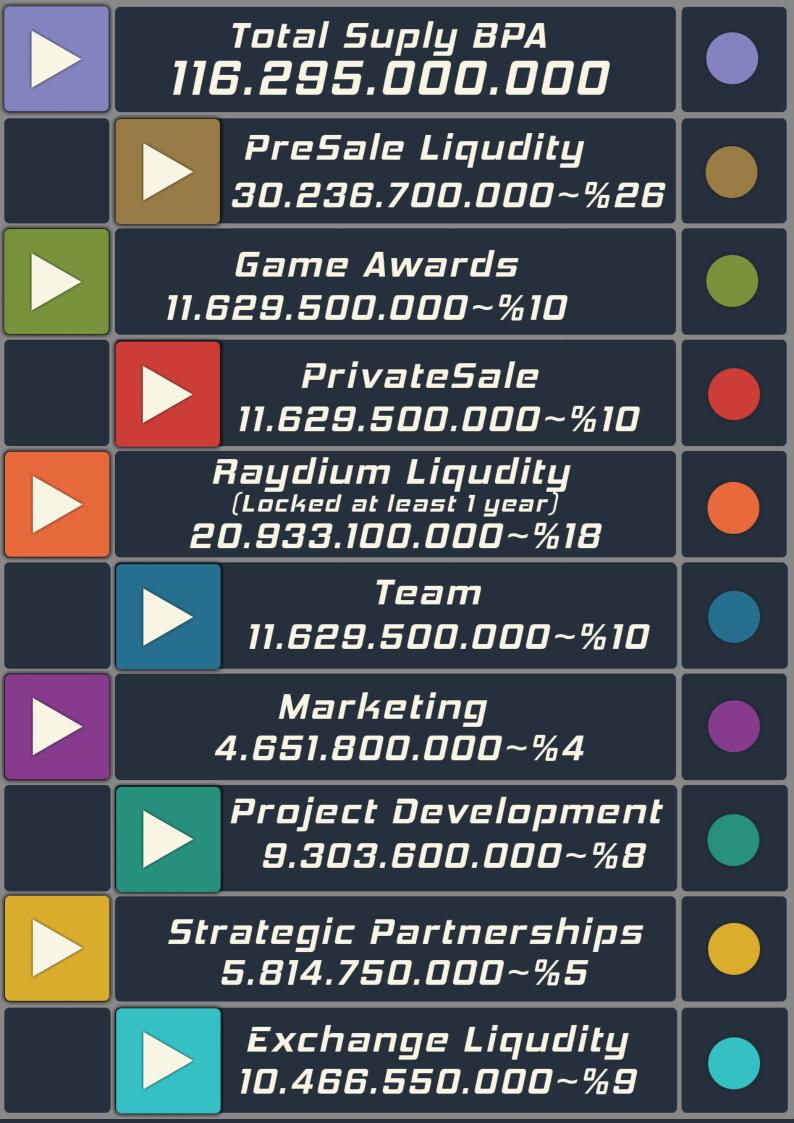

BPA TOKEN

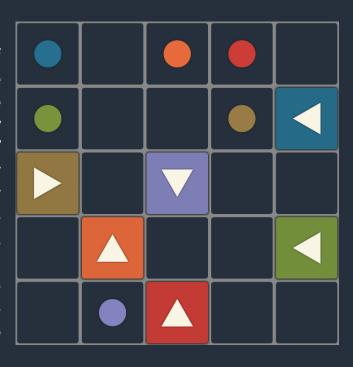

BPA Token will be our crypto currency that will provide our in-game economy. In this level, we will have our BPA supply to the market. Our total number of BPA Tokens will be 15 times the world population. Our BPA pre-sale will be 26% of the BPA number we will determine. Thanks to this offer, you will be able to participate in puzzles as a solver or bet with BPAs in your hand. When 8% of the total BPA is proportioned according to the difficulty of puzzle NFTs and the NFT of the puzzle is solved in-game, NFT owners will also be paid in BPA. The 2% BPA level will be used to finance the levels where there is no betting at the time of placing the bet.

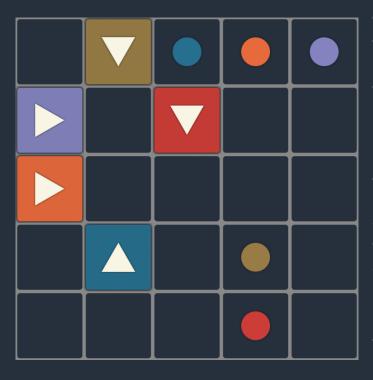

NFT2Earn♦(Pasive Earning)

Here's how the buy to win level works. Each of the NFTs offered will be a piece of the puzzle. Episodes of 3 different games with the same concept will be presented. These levels will be of different difficulty levels. The value of this puzzle NFT will be determined by the difficulty of its algorithm. After this stage, our own crypto token, BPA, will be When released. our game released, as players play and solve our game, the wallet that owns the puzzle NTF and the wallet of the solver will be paid with the BPAs we have mentioned above.

This reward will only be valid on the first solving of the puzzle NFT. Afte this stage, the tournament will b held 2 times a day, at the specified times. Bets will be settled before the game starts. In the tournament, random puzzle NFT will be selected and presented to the game. If one c the solvers in the game solves the game, the BPAs played by the loser will be distributed to the winners The owner of the puzzle NFT her will win some rewards in the wallet However, if the puzzle NFT canno be solved within the specified time the BPAs played by the bettors wi be transferred to the wallet tha owns the puzzle NFT.

Play2Earn◆

Here's how the play to win level works. After our game is published, our tournament level will be selected among our puzzle NFT levels, 2 times a day at the specified times. Before the tournament time comes, players will be able to register as solvers. Signing up will be with a minuscule amount in BPA. Betting on finishing times will be placed by other players on those who have registered as players. Bets will be on time and settled before other players. The first player to solve the puzzle NFT among the players will win the game. The registration fees of the losing players and some of the BPA deposited by the bettors will be transferred to the winning player's wallet. Thus, good players will be able to earn serious profits.

Bet2Earn •

Here's how the betting level works to win. After our game is published, our tournament level will be selected from our puzzle NFT levels 2 times a day at the specified times. The registration of players who will play as solvers 1 hour before the tournament time comes to an end. After this level, the betting begin. Bettors place **BPA** bets will registered puzzle solvers. If the player playing as the puzzle solver wins the game, all unwinnable betting BPAs are added up and punters who bet on the winning player receive a profit at the rate they bet. Winning the puzzle solver means it solves the published puzzle NFT before all other puzzle solvers. If the player on which the bet is placed is not the first to solve it, those who bet on that player lose the bet.

Brain Puzzle Art Roadmap

Phase 1

- Market research
- Token creation
- Whitepaper release
- Website development
- Generating puzzle NFTs
- NFTs Pre-Minting
- Launch of puzzle NFTs

Phase 2

- Private Sale
- Pre-Sale
- Token distribution
- Raydium listing
- The start of our continuous marketing campaign
- CoinGecko listing
- Practice game development

Phase 3

- CoinMarketCap listing
- More partnerships
- Collecting feedback from practice game
- Game development

Phase 4

- Game launch
- New puzzle game research
- CEX and other DEX listing
- To the Moon!

And more will be announced
